Video Setup Guide

For connecting iOS (iPhone) camera to Windows PC with Camo Studio

Introduction: This is a video setup guide for recording a video from iOS (iPhone) mobile device's camera to Windows PC by using Camo Studio application.

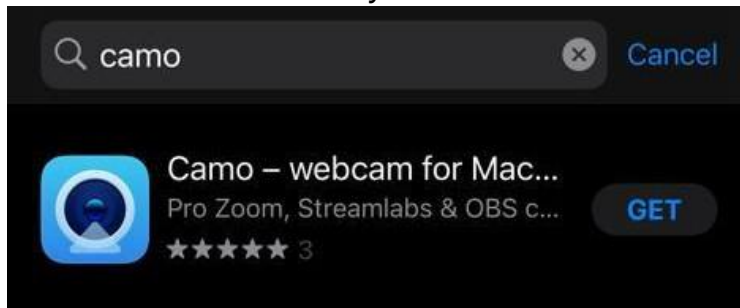

Step 1. Download the software for Windows

- Download Camo Studio for Windows PC from this link:
<https://reincubate.com/camo/downloads/>
- Double click on the downloaded setup file and follow the instructions.
- Once the installation is completed, start the Camo Studio application on your computer.

Step 2. Install the software for iOS mobile device

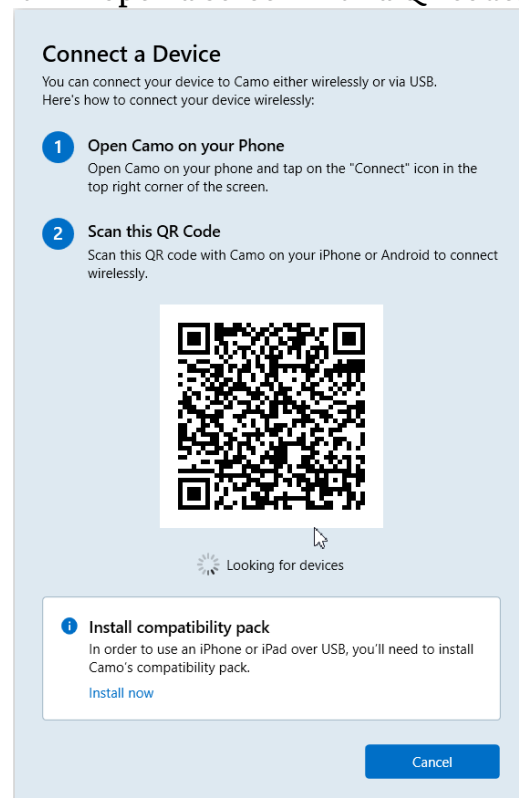

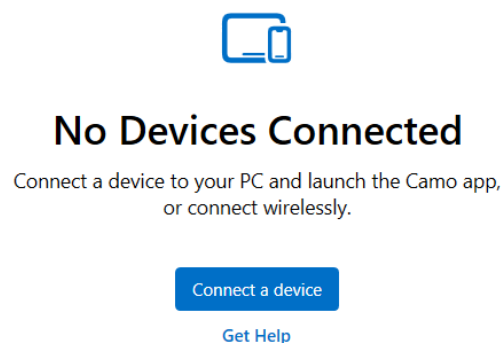

- Go to App Store on your mobile device and search “camo”.
- Click the “Get” button if you see the Camo Webcam application logo as below.

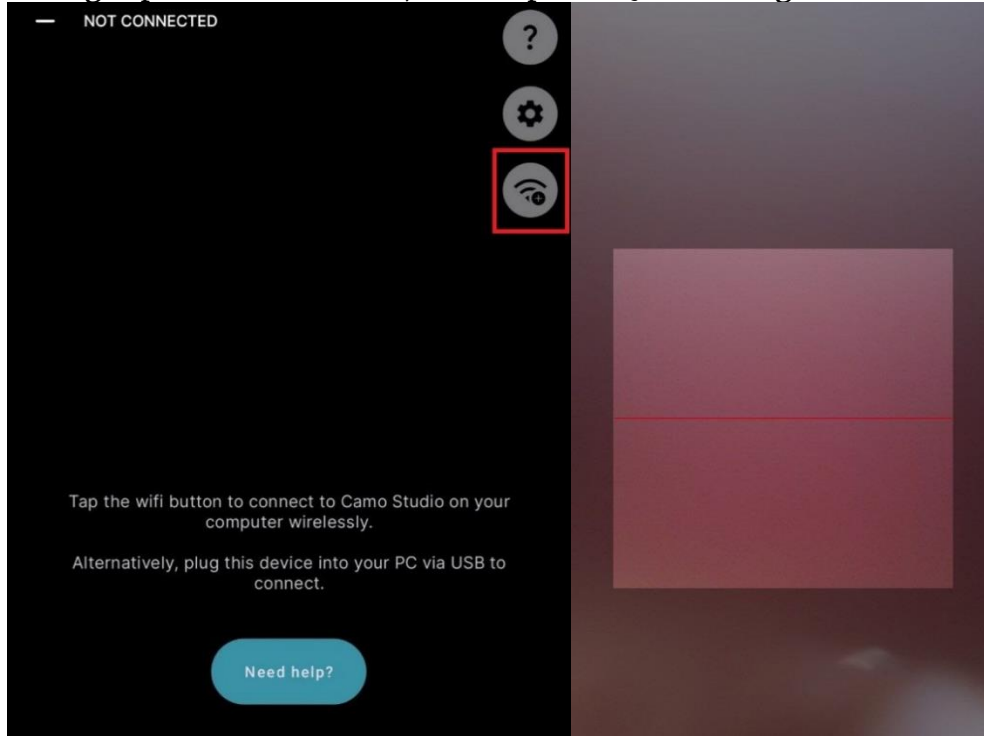

- Open Camo application on your phone once it is installed and grant the permissions.

Step 3. Connect your phone camera to Windows PC

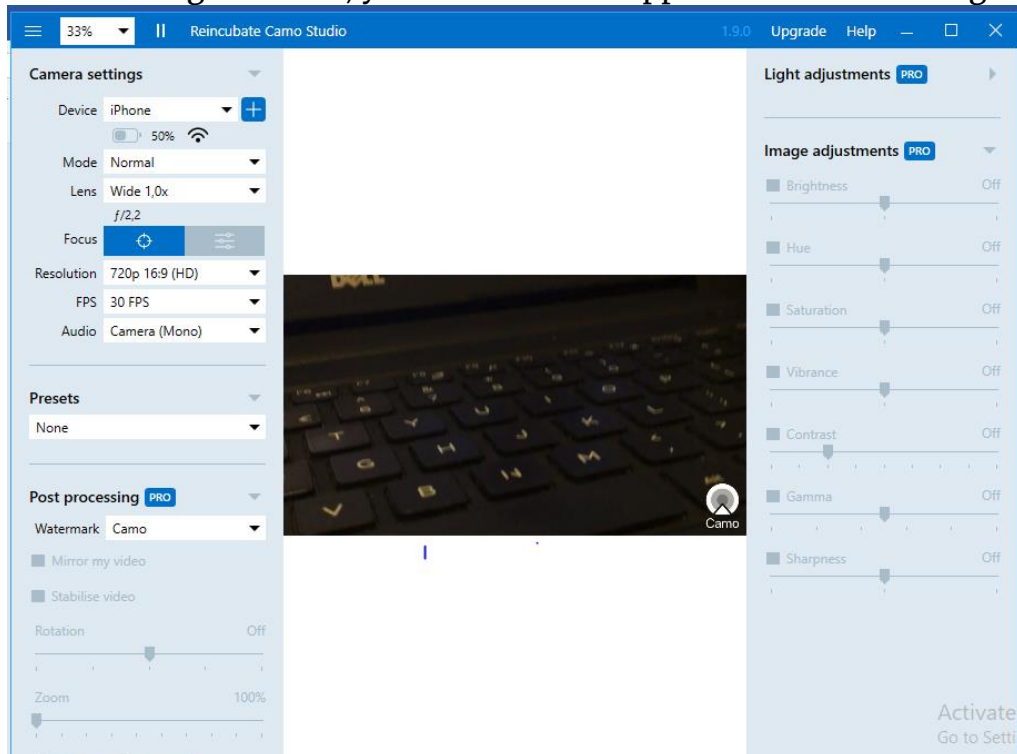

- Make sure your computer and your mobile device are connected to the same Wi-Fi network.
- Open Camo Studio software on your computer and click on “Connect a device” button you see in the center of the screen. It will open a screen with a QR code.

- Open the application on your mobile phone and click on the “Wi-Fi” icon on the right pane of the screen, it will open a QR scanning screen.

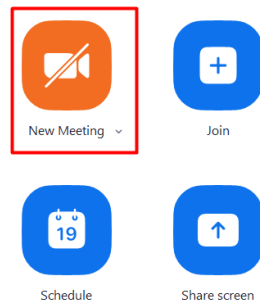

- Scan the QR code you see on the PC screen with the mobile phone.
- You are now connected and ready to record your video.
- For recording the video, you can use Zoom application. Review the guide below.

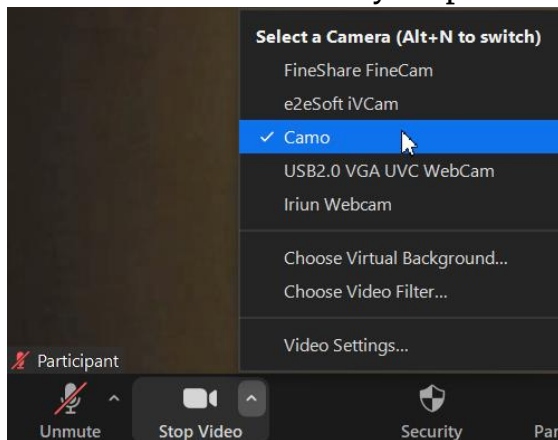

Step 4. Record the Video with Zoom

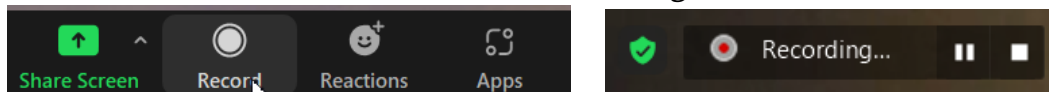

- Download Zoom software from [this link](#) to your PC.
- Install the application by double-clicking on it and following the instructions on the screen.
- Sign in to Zoom and start a new meeting.

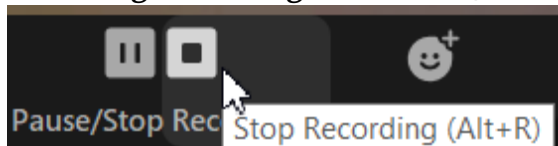

- Go to video settings by clicking on the arrow on the camera icon and select “Camo” and enable the video by clicking on the camera icon. Now you will be able to see the view from your phone screen on the Zoom call.

- Click on the “Record” button to start recording.

- Click on the “Stop” button to stop the recording. Please note that all Zoom recordings are being saved to C:\Users\\Documents\Zoom\ folder.

- Your video is now ready for being uploaded.
